

Left: support varies by lead; R(observed AGRI) is an offline retrieval reference, not independent COT truth.
Validation only: 407 windows, 15,275 station-lead rows, 22 dates; 3 stations × 3 seeds. Bars: mean of 9 station-seed RMSE values.
Hatched bars use future observations, unavailable at forecast time. Forecast COT − no COT: +1.687 W m^{-2}; paired two-day 95% CI [−0.340, 4.089].
