
Implemented operation

AGRI features: 13 → 16 → 32
COT gate: 1 → 64, split into γ and β
fused(r,c) = SiLU[agri(r,c) ×
(1 + 0.1 tanh γ(r,c)) + β(r,c)]

Readout concatenates:
- station pixel (8,8)
- 5×5 neighbourhood mean
- full-patch mean
- four COT statistics, geometry, lead embedding, station embedding
