Original paper screenshots and the redesigned architecture preview

Visual reference only; original figures remain attributed to their authors. The bottom panel depicts our model, using schematic tiles.

Ma et al. | arXiv:2603.14845v3 | Figure 2, PDF p.5

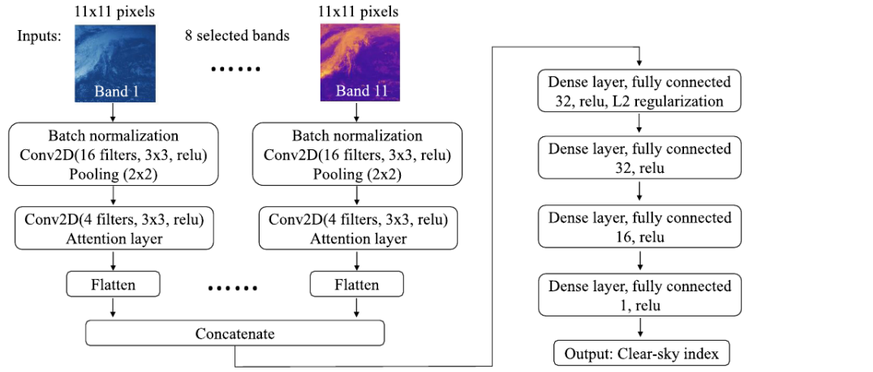

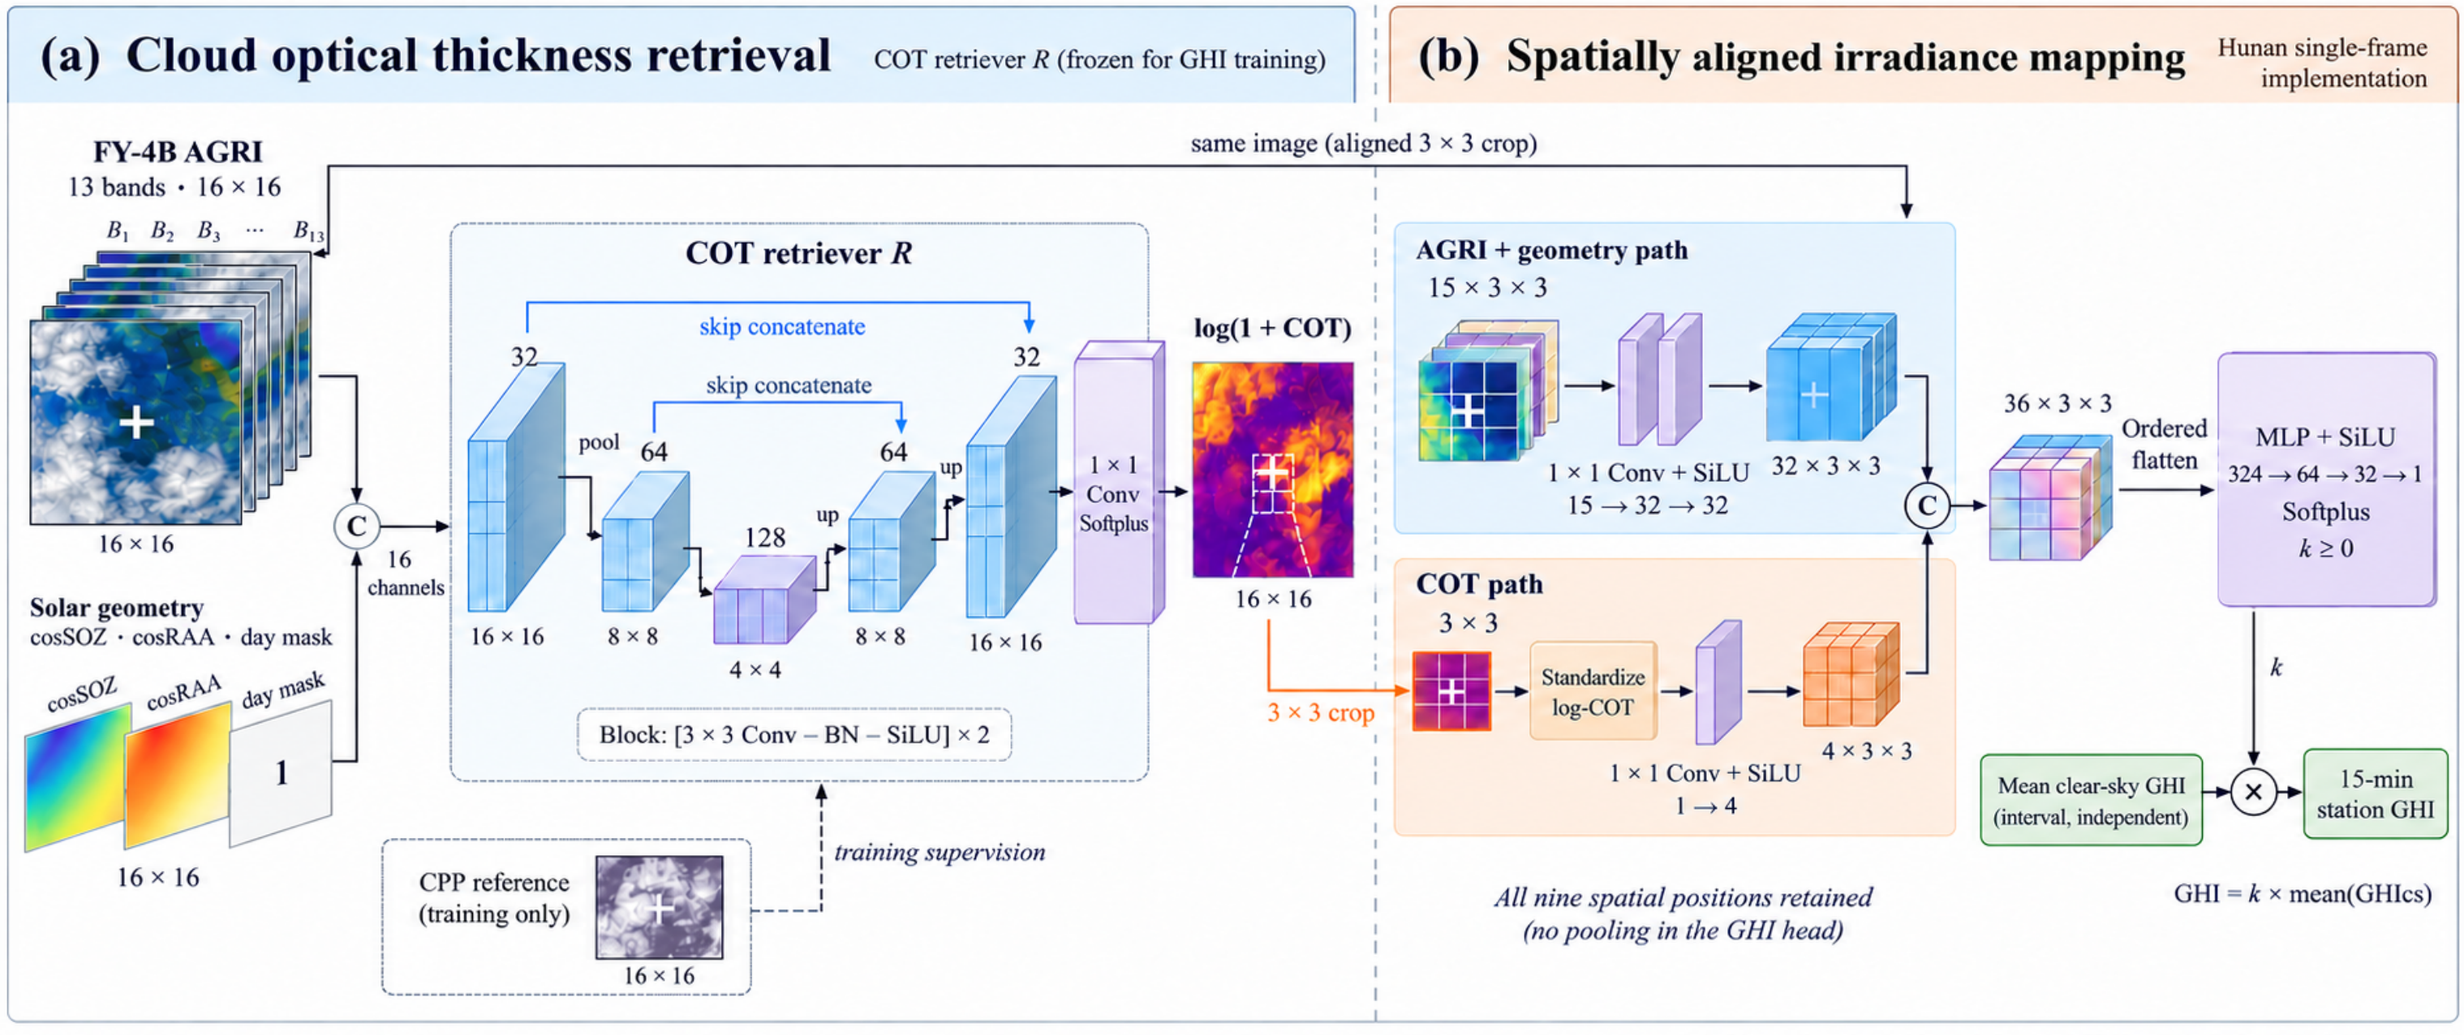

Fig. 4. The structure of deep learning model for estimating ground solar irradiance using the GOES-16 images of selected bands. The inputs are images of 8 selected bands with size of 11 × 11 pixels, the output is the clear-sky index. Note that the hyperparameters might vary for different locations, this figure is just to show the structure.
