Frozen coefficients: fitting dates vs held-out selection dates
(a) Improvement does not transfer
GHI RMSE (W m^{-2})
Fitting dates
Selection dates
Frozen baseline
+ COT correction
(b) Baseline bias changes sign
Mean prediction minus observation (W m^{-2})
Baseline error
Corrected error
Fitting dates
Selection dates
(c) Similar COT, different error sign
GHI bias or adjustment (W m^{-2})
Fitting dates: baseline bias
Fitting dates: correction
Selection dates: baseline bias
Selection dates: correction
0–3
3–10
10–30
≥30
Predicted station-centre COT
